CONTENTS

Foreword v

Preface vii

Nick Cozzarelli: A personal remembrance 1
Stephen D. Levene and Lynn Zechiedrich

Mathematical methods in DNA topology: Applications to chromosome organization and site-specific recombination 7
Javier Arsuaga, Yuanan Diao, and Mariel Vazquez

Conformational statistics of DNA and diffusion equations on the Euclidean group 37
Gregory S. Chirikjian

Perspectives on DNA looping 53
Laura Finzi

Differences between positively and negatively supercoiled DNA that topoisomerases may distinguish 73
Jonathan M. Fogg, Daniel J. Catanese, Jr., Graham L. Randall, Michelle C. Swick, and Lynn Zechiedrich

Calibration of tethered particle motion experiments 123
Lin Han, Bertrand H. Lui, Seth Blumberg, John F. Beausang, Philip C. Nelson, and Rob Phillips

Difference topology: Analysis of high-order DNA-protein assemblies 139
Makkuni Jayaram and Rasika Harshey

Useful intrusions of DNA topology into experiments on protein-DNA geometry 159
Jason D. Kahn, James R. Jenssen, and Vasavi Vittal

Topological analysis of DNA-protein complexes 177
Soojeong Kim and Isabel K. Darcy

Closing the loop on protein-DNA interactions:
Interplay between shape and flexibility in
nucleoprotein assembiles having implications
for biological regulation 195
Stephen D. Levene and Yongli Zhang

Four-way helical junctions in DNA molecules 213
David M.J. Lilley

Micromechanics of single supercoiled DNA molecules 225
John F. Marko

Flexibility of nucleosomes on topologically constrained
DNA 251
Andrei Sivolob, Christophe Lavelle,
and Ariel Prunell

The mathematics of DNA structure, mechanics,
and dynamics 293
David Swigon

Paradox regained: a topological coupling of nucleosomal
DNA wrapping and chromatin fibre coiling 321
Andrew Travers

Statistical-mechanical analysis of enzymatic topological
transformations in DNA molecules 331
Alexander Vologodskii

List of workshop participants 347
